

CARING FOR YABBIES

- **Water**

- Fill aquarium using the bucket provided with tap water, remember to keep count of how many buckets you use
- For every bucket of water, add water conditioner provided, following the instructions on the bottle
- Place the bubbler next to the tank and place the stone in the corner. Keep this in place using the lid

- **Food**

- Feed the yabby 2-3 times per week
- Cut carrot into thin triangle wedges and offer to the yabby using the tweezers.
- Feed algae wafers every other day.
- Depending on the temperature, they may or may not eat.
- Don't stress if they don't eat at all – they can survive months without food.

- **Cleaning**

- Remove any uneaten food the next day
- For large amounts of debris in the water, use the net to scoop it all out
- Ensure yabby is returned in the bag and inside the bucket (this is their seatbelt for the car ride).
- Ensure yabbies are checked at least once over the weekend
